Prior Releases:

1.1.0.14
– Added TR-069 feature
– New version of NMS feature (version: 1.2.1.0) available
– Added Captive Portal feature
– Optimized the "Save and Apply" function

- Revised the behavior that did not check the MAC
- Fixed some of the SSID not getting the correct settings when all 16 SSIDs with WPA2 security were enabled
- Revised the NMS function for monitoring SSID on the web GUI
- Changed the SNMP Object Identifiers (OID) to 3136
- Extended the HTTP log-in timeout during idle
- Fixed the AP behavior in NMS mode where it would self-check itself as one of the managed AP's

1.1.0.2
- Changed FW version name from 1.0.0.5 to 1.0.1.2
- Guest network feature is now available in standalone mode in addition to managed mode

1.0.0.5
- Fixed system clock
- Fixed when set to AP mode, the VLAN could not be configured
- Fixed the 5GHz network dropping when the WDS feature used to connect between APs. It would randomly drop and would require a reboot of the system to recover
- Fixed WiFi performance issue
- Fixed NMS 5GHz monitoring feature showing a value of "4320" when in idle time.
- Changed Web GUI model name to "WAP-EN1200C"
- Changed Web GUI Company name to "Comtrend Corporation"

1.0.0.3
- Fixed when the scan feature would stop scanning when doing a scan or refresh. No information will be shown under the active section

1.0.0.2
- Fixed VLAN tagging feature
- Fixed HTTPS access

1.0.0.1
- Fixed NMS v1.2 feature

Upgrade Procedure:

1. Upgrade Software
    a. Assign a 192.168.2.x/24 static IP address on your computer. Where x is a number in the range of 3-100.
    b. Open a web browser, connect to 192.168.2.1, and login with username **admin** and password **admin**.
    c. Click on **Advanced→Update Firmware**: Software Upgrade. Click on "Browse" button

      d.   Locate and double click on the appropriate Comtrend software image

      e.   Click on "Update" button.   You will be informed that the product will become unresponsive and to not turn off or unplug the product, click "OK". New window will pop-up showing the progress of uploading the software. Upon completion, the GUI page will be redirected to the log-in page.

2.   Verify

      a.   Log-in to the GUI.

      b.   Information section of the GUI shows the "Firmware version". Verify that the latest code reflects: 1.2.0
