

Quick Start Guide

GS-7260 | 5-Port Gigabit IGMP Switch

Understanding your IGMP Switch

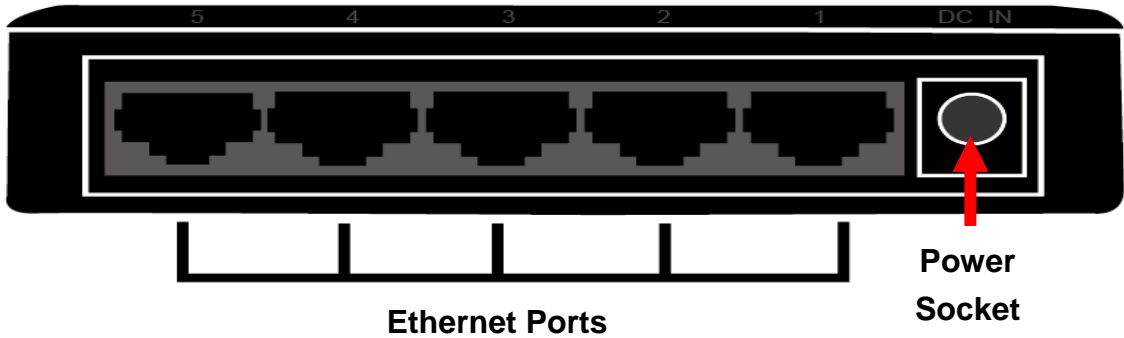

This switch contains LEDs to show the activities and status of the ports, including power LED and Link/ Act LEDs. Please refer to the front panel of the switch for the positions of the LEDs :

Look at the following table for the description of the LEDs:

LED	Status	Operation
Power ⏻	Steady Green	The switch is powered on
	Off	The switch is powered off
Link/ ACT 1-5	Steady Green	1000Mbps connected
	Amber	10/100Mbps connected
	Blinking	Sending or receiving
	Off	Port disconnected or link fail

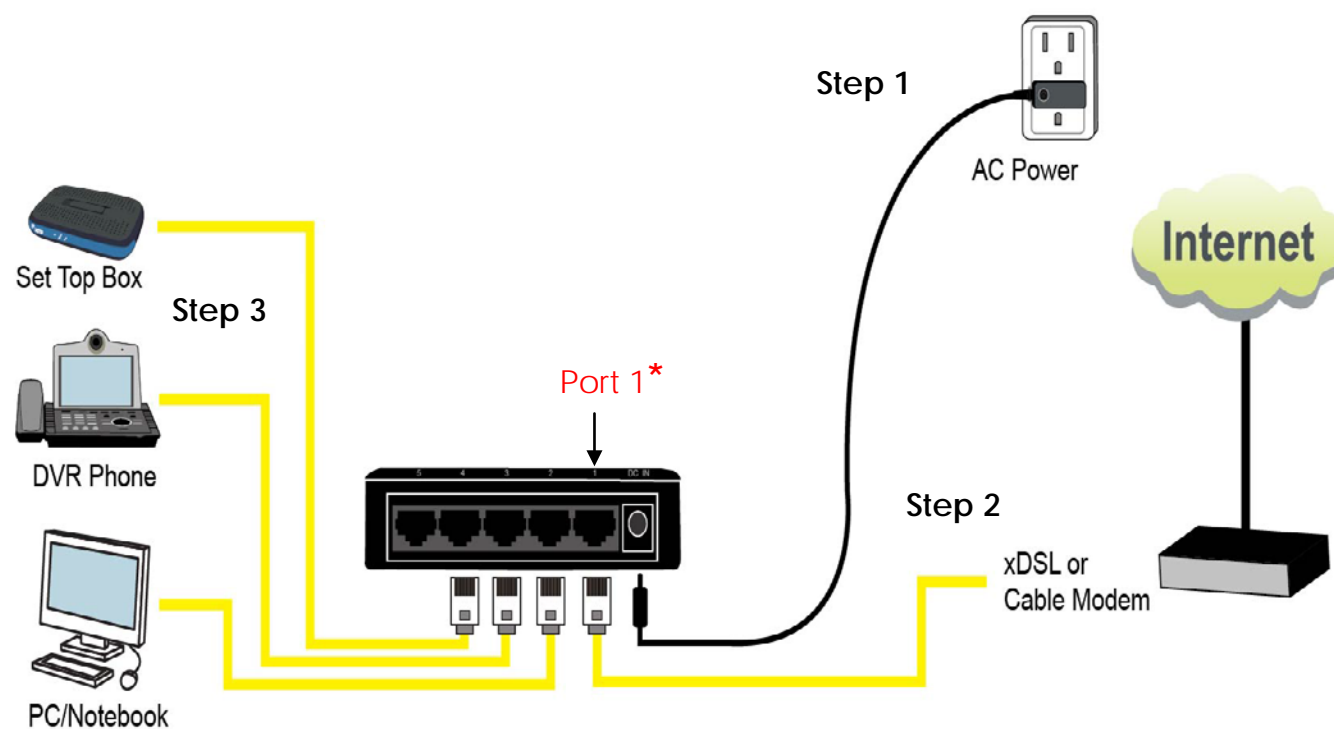

Rear Panel

Basic Setup

(Note: This switch only supports IGMP v1 & v2)

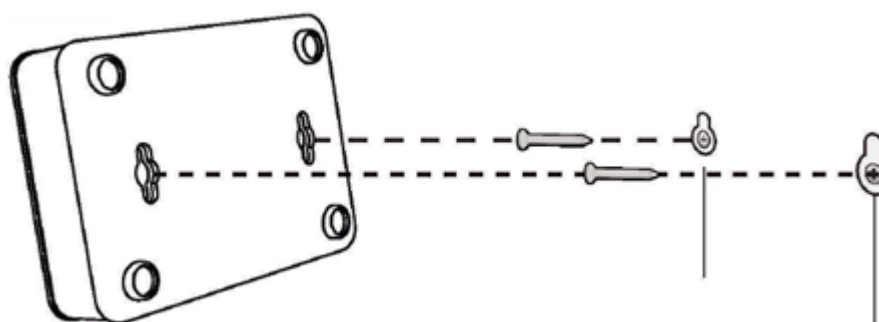

1. Connect the A/C power adapter to a power outlet, then connect it to the Power Socket of the switch. The power ⏻ LED turns on when the switch is receiving power.
2. Connect your xDSL / cable modem to Port 1 of the switch by Ethernet cable.
3. Connect your computers and network devices (Ex. Set-Top-Box, DVR, etc.) to any available port on the switch.

* Make sure xDSL/Cable modem is connected to Port 1.

Optional Wall Mounting Instructions

Troubleshooting

The following information should help you diagnose basic setup or installation problems.

1) POWER Indicator is OFF: If the Power LED goes off, please make sure that your power outlet is working properly (perhaps by testing with another device). Then plug in your GS-7260 again. If the Power Indicator does not light up, please contact your equipment supplier for further information.

2) NETWORK LED is OFF: If a LAN LED fails to light up, check that the LAN port of the Switch is connected firmly to the LAN port of the other device. To check the condition of the Ethernet cable, use another cable to test the same connection.

Congratulations, you are done!
